

# undo sudo usermod -a -G docker \$USER

Asked 6 years, 7 months ago Modified 6 years, 7 months ago Viewed 6k times

recently I did a `sudo usermod -a -G docker $USER` command. It made my linux behave funny, getting stuck at finishing screen of restart, not opening chrome a single time. I would like to undo it. didn't find anywhere online how to do it. would love some help!

thx in advance

docker sudo

You can remove `$USER` from `docker` group -

`gpasswd -d $USER docker`

Ref - <https://linux.die.net/man/1/gpasswd>
