

# How to run pip for python3.9 in VS code server?

Asked 2 years, 10 months ago   Modified 2 years, 1 month ago   Viewed 2k times

I have hosted a vs code server to run my python files but when I am doing `pip` it is showing `bash: pip: command not found` I wanted to know how can I install modules in the same server

0

Thanks for your help

python

vscode-extensions

vscode-remote

If you are running python 3, try `pip3` instead. – Tzane Oct 15, 2021 at 7:14

its not working – Raghuvanshi Oct 15, 2021 at 7:17

- 1 If you are sure it is installed, you can try calling it with your python interpreter with `python -m pip` – Tzane Oct 15, 2021 at 7:19

thats the problem i cant use pip not even `python -m pip` – Raghuvanshi Oct 15, 2021 at 7:25

- 1 You have to install python and/or pip on the remote machine as well. – Tzane Oct 15, 2021 at 7:29

I came across this while running code-server through coder. Was thrown off by the new environment, but the solution is actually fairly simple.

0

- Start by opening up a terminal (F1 > Terminal: Create New Terminal).
- Type `lsb_release -a`. If your environment is like mine, you'll see it's a standard Debian. The pitfall here is that its apt sources haven't been updated.
- Type `apt update` to update the sources and get the packages.
- Type `apt install python3-pip`

Hope this helps!
