

pip check

Usage

[Unix/macOS](#) [Windows](#)

```
python -m pip check [options]
```

Description

Verify installed packages have compatible dependencies.

[Skip to content](#)

Examples

1. If all dependencies are compatible:

Unix/macOS Windows

```
$ python -m pip check
No broken requirements found.
$ echo $?
0
```

2. If a package is missing:

Unix/macOS Windows

```
$ python -m pip check
pyramid 1.5.2 requires WebOb, which is not installed.
$ echo $?
1
```

3. If a package has the wrong version:

Unix/macOS Windows

```
$ python -m pip check
pyramid 1.5.2 has requirement WebOb>=1.3.1, but you have WebOb 0.8.
$ echo $?
1
```
