

pip cache

Usage

Unix/macOS Windows

```
python -m pip cache dir
python -m pip cache info
python -m pip cache list [<pattern>] [--format=[human, abspath]]
python -m pip cache remove <pattern>
python -m pip cache purge
```

Description

Inspect and manage pip's wheel cache.

Subcommands:

- `dir`: Show the cache directory.
- `info`: Show information about the cache.
- `list`: List filenames of packages stored in the cache.
- `remove`: Remove one or more package from the cache.
- `purge`: Remove all items from the cache.

`<pattern>` can be a glob expression or a package name.

Options

--format `<list_format>`

Select the output format among: human (default) or abspath

(environment variable: `PIP_FORMAT`)
