Configs keep resetting

[Get help!](#)

im using rewasd to use my xbox controller on ps5 but for some reason every few weeks all my configs get reset and all my button mappings are just gone....

this is gonna be the 5th time now im gonna have to rebind all my buttons for all my profiles and im so over it. Why does this keep happening.

Could you give a more detailed description of what's going on? Do config files and Profile folders stored in `C:\Users\Public\Documents\reWASD\Profiles` just disappear, and you have no configs in reWASD? Or the config files are still there, and the mappings disappear?

Which reWASD build is currently installed? You can check the full version number in Preferences, for example, 6.3.0.1234.

Could you also check *Even Viewer* just in case: press Windows key, type in Event Viewer, press Enter. Then navigate to Windows *Logs > Application*, press Ctrl+F, type in reWASD and search for events. If you find any, please use the panel on the left to Save them, and send then to hi@rewasd.com.

Ideally, we would ask you about any patterns: what have you been changing in the system maybe, since this happened several times by now.
