## Vaultings

- On [September 11th, 2018](https://forums.warframe.com/topic/1007828-limbo-prime-access-ending-soon-valkyr-prime-entering-the-vault/), it was announced that Cernos Prime, along with [Valkyr Prime](#) and [Venka Prime](#), would enter the [Prime Vault](#) and be retired from the reward tables on September 25th, 2018. Any preexisting components or fully-built weapons will remain as is.

## Notes

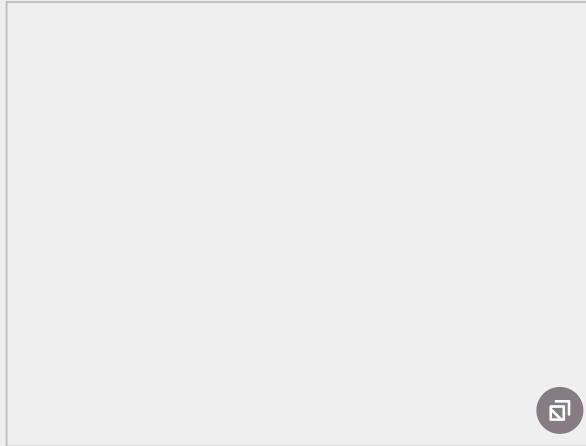

- The +50% bonus damage on [headshots](#) is multiplicative to other sources of +bonus damage on headshot such as [Primary Deadhead](#) and [Prowl](#).
- The Cernos Prime's shots fire multiple arrows in a fanning spread. The number of arrows is affected by [multishot](#) mods, similar to shotguns.
- [Alternate Fire](#) toggles a Horizontal Spread or Vertical Spread fire.
- [Heavy Caliber](#) will decrease accuracy by a small amount, making each arrow fire slightly off from its normal trajectory.
  - As of [Hotfix 19.11.2](#) (2017-02-17) this was increased dramatically, making the weapon act more like a wildly-spreading shotgun than a fan of arrows.
  - The arrows seem to be spread in a formation where some arrows are lower than the others, rather than being wider spread than others, this might make it difficult to get headshots with multiple arrows.
- Low accuracy will effectively invert Cernos Prime's firing mode. Horizontal shots will follow generally vertical line of shot and vice versa. This behavior is best observed while using [Split Flights](#)

### Ammo Changes

We understand the power fantasy of these weapons is very popular for some, so our first approach was to keep them powerful, but limit how often they can be used by making changes to ammo pick-up.

### Ammo Pickup Overrides

The following weapons now have ammo pickup overrides, meaning they gain less
