`enp5s0` is your NIC which is up and looks normal, `vmbr0` is your network bridge and looks normal.

Can you do `ping 1.1.1.1` and `ping google.com` to see if it's DNS or something?

Edit: also ping your gateway, probably `ping 192.168.1.1`

Perhaps another machine was assigned [192.168.1.190](#) by your dhcp server and packet routing is getting confused?

⊖ ↑ 2 ↓ [Reply](#) ...

**FourAM** • 3y ago

Yeah this feels like an IP conflict to me. ARP pointing at whoever made noise last.

If your pve host has a static assigned IP, try another one and see if that fixes it.

I've installed v6 and v7 and am having no luck with getting a network connection working

/etc/network/interfaces :

Auto lo Iface lo inet manual

Iface enp5s0 inet manual

Auto vmbr0 Iface vmbr0 inet static Address 192.168.1.190/24 Gateway 193.168.1.1 Bridge-ports enp5s0  
Bridge-stop off Brdige-fd 0

Hardware is an Asus x570-plus. With ryzen 9 3900 bios is fully up to date
