Heat Damage

 74

 EDIT

< [Damage](#)

DAMAGE EFFICACY

x1.5 damage to *Infested*
x0.5 damage to *Kuva Grineer*

STATUS EFFECT

 **Heat** sets enemies on fire causing them to panic and temporarily reduces their armor up to 50% with multiple stacks.

—In-game Description

 **Heat Damage** is one of the four primary elemental damage types. Deals increased damage to [Infested](#) but reduced against [Kuva Grineer](#). Its [Status Effects](#) ignites enemies with damage over time, causing them to panic and temporarily reduces [Armor](#).

Status Effects

General

The status effect of  **Heat** damage is **Ignite**. It sets the enemy ablaze, which makes them panic, reduces their [armor](#) by up to **50%** and, after a 1 second delay, deals a tick of damage every second for **6** seconds.

Enemies killed while under or by a  **Heat** proc will be left in ashes, burning away shortly afterward.

We want to hear from you!

$$\text{Modded Base Damage} = \text{Base Damage} \times (1 + \text{Base Damage Bonuses}) \times (1 + \text{Faction Damage Bonuses})$$

Notice that modded base damage calculation used for DoT is not the same as normal damage calculations, ignoring physical and elemental damage bonuses.

$$\begin{aligned} \text{Heat Proc Damage per Tick} &= 0.5 \times \text{Modded Base Damage} \\ &\times (1 + \text{Heat Damage Bonuses}) \\ &\times (1 + \text{Faction Damage Bonuses}) \\ &\times (1 + \text{Status Damage Bonuses}) \\ &\times \text{Additional Multipliers} \end{aligned}$$

Additional Multipliers include modded critical multiplier on [Critical Hit](#) and multipliers on [Enemy Body Parts](#); these stack multiplicatively with each other.

For example, tick damage for a weapon with an innate 100 damage, [Serration](#), [Hellfire](#), [Bane of Grineer](#), and [Rifle Elementalist](#) will be:

$$\text{Modded Damage} = 100 \times (1 + 1.65) \times (1 + 0.3) = \mathbf{344.5}$$

$$\text{Heat Mod Multiplier} = (1 + 0.9) \times (1 + 0.3) = \mathbf{2.47x}$$

$$\text{Tick Damage} = 0.5 \times 344.5 \times 2.47 \times (1 + 0.9) = \mathbf{808.3692}$$

As can be seen in the above calculations for tick damage, Faction Damage is applied twice, making their effective bonus = $(1 + \text{Faction Damage bonus})^2$. This is a $1.30 \times 1.30 = 1.69$ or +69% increase for the 30% Faction Damage mods and $1.55 \times 1.55 = 2.4025$ or +140.25% for the 55% Primed Faction Damage mods.

Heat tick damage and proc duration

Time from initial proc	0s	1s	2s	3s	4s	5s	6s	7s
Tick damage occurred?	X	✓	✓	✓	✓	✓	✓	X

Heat Inherit and Repeated Application

Repeated application of [Heat](#) procs do not stack tick damage in the same way other damage over time (DoT) [status effects](#) like [Toxin](#), [Electricity](#), or [Slash](#) do.

Instead, a [Heat](#) proc both adds a stack **and** refreshes the duration of **all** currently active heat stacks on the target. This allows for ramping up [Heat](#) tick damage indefinitely (scaling up linearly) as long as heat status is kept refreshed within the 6

We want to hear from you!

Additionally, all [Heat](#) status of damage per second, with new

Crowd Control

Enemies affected by a **Heat** proc are ignited in flames and will panic and flail around for a few seconds, preventing them from taking any other actions. The length of the panic animation depends on enemy type: approximately **4** seconds for humanoids, **3** for most Infested, and **2** for [MOAs](#) and [Chargers](#), however [Ospreys](#), [Bosses](#) and [Tenno](#) are immune, and their ability to act is not impeded. Repeated application of **Heat** status will reapply the panic effect.

Armor Stripping

The **Heat** status effect's armor strip has a ramp-up time when it first procs and a ramp downtime when the proc ends. Every 0.5 seconds **after** the initial proc, the enemy will have 15%, 30%, 40%, 50% of its armor stripped. It will therefore take 2 seconds to reach the maximum armor strip.^[1] Proccing more heat status effects within this time frame will not speed up the armor stripping process.

After the proc ends, the target will regain armor every 1.5 seconds for 6 seconds. The enemy's armor strip will decrease as follows: 50%, 40%, 30%, 15%, 0%.^[2]

Status Duration mods will increase the time intervals for the armor strip as expected. For example, with +100% Status Duration, the armor strip will occur every second instead of every half second. As a result, the full 50% armor strip will only be achieved after 4 seconds.

Heat status [armor](#) reduction is **multiplicative** with other armor reduction sources. This can be expressed as the following:

Armor after reduction = $(1 - 50\%) \times [1 - (20\% + 6\% \times \text{Number of Corrosive stacks})] \times (1 - 18\% \times \text{Number Corrosive Projections})$

Railjack

Railjack <DT_FIRE>Heat Damage results in a Sear Status Effect which causes rounds to burn through enemy ships and deal Damage Over Time.

—In-Game Description

We want to hear from you!

[ck](#) space enemies is **Sear**, dealing **6** s [Railjack](#), it causes a **Fire Hazard**

WARFRAME Wiki

Sear ticks deal **100% × *Modded Damage* × (1 + Heat Damage bonuses)** as **Heat** damage. Unlike standard heat, each proc has an independent duration and is not refreshed by additional heat procs.

Sear tick damage and proc duration

Time from initial proc	0s	1s	2s	3s	4s	5s	6s	7s
Tick damage occurred?	✓	✓	✓	✓	✓	✓	✗	✗

Elemental Combinations

Heat damage mods can be combined with other elemental mods to create a new elemental damage type.

- Heat** + **Cold** = **Blast**
- Heat** + **Toxin** = **Gas**
- Heat** + **Electricity** = **Radiation**

ance reduction that will multiply the

damage bonus. However, it does **not** reduce armor resistance, where it would have an exponential effect with health resistances.

- **Heat** damage and its combination elements are not very effective against Corpus. In addition to **Heat** damage being reduced against Proto Shields, **Gas** damage is reduced against Flesh and **Radiation** damage is reduced against Shields (though it is increased against Robotic).
