- Different Polarities ( vs.    )
- As with any other [Prime](#) Warframe, moving close to the location of an [Orokin Void Death Orb](#) will restore a pulse of 250 [Energy](#) to nearby allies, even if that Death Orb is inactive, destroyed, or non-present. This effect can only occur once per orb.

Trivia

- Excalibur Prime is the first Prime Warframe in the game.
 - He is also the first Prime Warframe to come with two different polarities, as opposed to one. This was followed by  [Ember Prime](#) and  [Loki Prime](#).
- There is a statue of Excalibur Prime inside the Orokin Vaults on Deimos, and one of the [Lua Spy](#) vaults.
 - Interestingly, at the start of [Update 11.0](#) (2013-11-20) Excalibur Prime was given a short-lived full body skin called "[Alabaster](#)", which was explained by [Digital Extremes](#) as a test skin that was released by mistake. The skin's texture was similar to said Vault statues.
- Compared to the later prime Warframes, Excalibur Prime has the least cosmetic difference compared to his standard counterpart, with the only significant additions being the [Void Key](#)-shaped emblem on his helmet and golden blades along his forearms.
- When he was released, it was widely believed that Excalibur Prime had a slightly higher shield recharge rate compared to the non-prime variant.
