[Autohotkey] The ultimate melee macro: Rapid-fire and spin attack using 1 key, highly usable and easy to configure

[Resource](#)

So, I'm sharing this and hoping it will come useful to someone looking to use Macros to ease the annoyances that you face everyday with super high speed attacks and melee. E.g:

- The tedious Maiming Strike spam for min-maxing.
- Excalibur exalted blade spams
- Any really fast melee weapon

I haven't found any macro that suits my requirements. This one works very nicely to my tastes :)

Anyway, let me know if you like this and if you have any suggestions to improve this I'll be happy to listen.

EDIT: Wow the comments, I was expecting some controversy but not as much. Anyway, long long story short, the macro only sends inputs without reading any feedback from the game. I have a few accessibility issues using my

alternately you can bind melee to mouse4, then spin to win comes easy.

This not working for me at all, Any in-depth guide how to setting?

```
melee= XButton1 ; -- NOTE: You have to change HotKeys below as well (E.g. change XButton1)
```

```
meleeKey= 0
```

```
slideKey= Shift
```

I changed meleeKey to 'E' (default melee attack) and slideKey to 'Ctrl', and what is XButton1?

Also

```
Sublime Text 3 + Package Control + Autohotkey package
```

Do i need all of them or just AHK if i only need copy-paste code.

Can't this result in a ban, though?

In a non-competitive environment, macros of this nature in general "SHOULD BE OK" in terms of reasonable judgement. I don't see any significant advantage to using a macro like this other than convenience and reduction of stress on the hands. The same advantage you would get by having an ergonomic desk and ergonomic mouse and keyboard, i.e. convenience.

That said, use **this at your own risk**.

Finally and in my personal opinion. I really wish maiming strike would be more usable, as my min-maxing genes are itching to use it as often as humanly possible.

Finally finally, sorry for creating a mess of controversy...

I've been trying this out and the results are somewhat bizarre - changing the key settings to match the Warframe defaults seems to mostly not work (I did remember to change the Xbutton modifier to Ctrl, but it just results in my frame rolling a lot).

In the end I changed my Warframe config to match the ones that the AHK script is expecting but I'm having another problem - engaging the endless spin2win macro alt-tabs my Warframe window.

Might give this script another try later on, right now I feel like there must be something I'm missing.

EDIT: Just realized that it's probably because I never hit F2 before doing anything, then I tried hitting F2 and it also minimizes my window. Hmm.
