OpenWRT as main router in Proxmox

[Help](#)

Hello,

I am completely new to Proxmox, I got a device to use as my main router with OpenWRT and some VMs. I have some basic Linux knowledge playing with some Pis and other SBCs with Armbian and Mint on my PC.

I think all what you said can be done. Be aware tho' that for a router you usually want at least 2+ ethernet ports.. For VMs you want a hardware accelerated processor.. The rest is configuration and can all be done with virtual switches, you just gotta do the work to read up on all that yourself
