Decarbing shatter: nesseeary or not?

Got myself a gram of shatter. If I was to make some edible with this. Must I decarb shatter for can I just mix it with butter ? Looked around but a lot of mixed opinions

Why is decarbing concentrates so necessary?
calls for 220 for 25 min, wouldn't it decarb while

You know how when you bake chicken bread
temperature of 160? If your food is fully cooked
won't get the effect you're looking for.

Big fan of 250 for 45 min. Been making capsules and oils for years. Lots of folks have a different opinion on how it's done but I can say I personally do it this way and it always fire.

Since it's only 1g of shatter, you will hardly need more than 1 tsp coconut oil. Shouldn't be enough to effect your recipe. Mix it in and mix it well then bake it.

If you want to get high from eating it, it must be decarbed. Baking can do it for you, if temperature is high enough and baking time is long enough. Boiling can do it too, but takes longer than you'd think.

Most things wont get nearly as hot as you need to be internally, if it did it would be so hard you couldnt eat it afterwards....

Best fool proof method to decarb shatter? Tried it before with bud .

Plan so far is in a wee glass dish with some oil/butter

Please do this outside or in a well ventilated area with a load of residual butane in it.

Butane will combust if it exists in high enough c

Left my qwiso outside last night to evaporate and it was cold this morning, not sure if that has anything to do with the white looking stuff forming at the bottom.
