internal pop filter material?

So I'm getting my girlfriend an se v7 for her birthday, she's been wanting one for a while, but she thinks the red internal pop filter looks pretty tacky (small thing which isn't dealbreaking for her). So I wanted to make a new one myself, but in purple. Does anyone know what type of foam is used, and where I could find sheets of it in different colors? I've thought of just spray painting a spare black one purple but I'd doubt that will work. Thanks so much in advance!

it also comes with a black foam filter in the box as well which might be much easier than making something custom

fuzeebear • 2y ago •

Yep. Based on listing I've seen it does indeed, and the grille just unscrews like one would assume it would <https://i.imgur.com/APt2vZF.jpg>

I wasn't sure about the red either, but if it's anything like my DynaCasters it's actually surprisingly subtle and classy. That said, I would probably try adding a thin fabric to color it rather than replacing or painting the foam. It might be possible to dye it, but I have no idea what that process is like.

I worry that a replacement foam piece would have to be quite precisely the right shape to avoid getting crunched up or flopping around inside, and if either happens it could impact the sound. Too tight and it could cut down the sensitivity and high frequency response, too loose and the sound of it shaking around in there could be picked up, probably very loudly. Hence my initial recommendation to wrap the original foam in a cores fabric, ideally cutting and sewing it to the right shape to avoid folds and wrinkles

Yeah that might be a good call. Billy gibbon's signature has a purple pop filter so I wish they'd just sell that grille separate but nope. I guess I'll give a thin fabric a go. Thank you so much!

Have you tried messaging SE's customer support / sales dept. to see if they'll sell you a Billy Gibbons replacement pop filter? The contact info is all on their site - [Support](#)

Don't spray paint the foam, you'll block all the pores, and over time particles will fall onto the capsule and ruin it.

First off, are you both aware that the pop filter goes in the inside of the microphone and not the outside for the SEV7? She might be thinking it's something that goes on the outside and imo it doesn't look tacky at all when you put in the inside.
