Dynamix system temp, fan auto control - Won't detect drivers

What do you do, when Dynamix (Fan Auto Control, and System Temp) Won't detect drivers?

Can i manually set this somehow? Is this a Ryzen thing?

Board: MSI X470 Gaming Plus

CPU: Ryzen 7 2700X

Edit:

Adding links that might be useful to somebody.

I've got a gigabyte 7TESM from 2011 and I've got the same issues. I think it just might be the program.

Didn't work for me personally, but it did for a lot of other people with the issue.

i feel like [u/spaceinvaderone](#) could make a really good video what to do in this event. Or if there is anything that can be done..

I've seen some people having luck with drivers NCT6775 however all i can get is the auto fan control to show up.

Same board, same problem. I've heard maybe a newer version of unraid might help but I've been waiting on that.
