How can I retrieve IMEI number from a device running OpenWRT?

I've got a Chinese WiFi/Cellular router that came pre-loaded with OpenWRT (OpenWrt Barrier Breaker unknown / LuCI Trunk (svn-r10457)).

How can I retrieve the IMEI number for the 4G interface it has? (The interface appears to be named "3g-4G_WAN".)

Is there a command I can use when logged in via SSH, perhaps?

Connect to the device (eg.: `sudo minicom -D /dev/ttyUSB0`), enable local echo (`ctrl+a e`), and send at commands: `try: ATi1 AT+CGSN ATi ...`

Just guessing, but try "ip address" or "dmesg" at a command prompt. You might also try installing pciutils ("opkg install pciutils") to run the "lspci -vv" command.
