MrBolkvadze

The Ultimate Guide To Fix Razer Synapse PC Lag

[Tips](#)

Hi there.

I want to point out in the beginning that not everyone might experience the same issues but I've realized that high-end PC shouldn't be lagging as much as mine did.

I've been trying to figure out this issue for a week now since I've built my PC. My PC would suddenly start being slow and unresponsive for no reason. No matter if I was in a game or browsing or even being on desktop only.

Issue: My PC would start being slow. If I would press on the Windows key, for example, it would take at least 3 seconds to open a start menu and the animations all over Windows during this state were terribly laggy.

For the sake of this post here are my specs:

GPU: EVGA RTX 3070 XC3

I'm glad it helped. I've reinstalled my Windows shortly after and had to follow my own post steps lol. Enjoy a lag-free experience.

Thanks for sharing, i noticed the exact same behavior with Synapse 2: restarting it seems to restore the windows performances.

This case is so weird since the task manager see no CPU nor GPU % load on any process, still restarting synapse or not launching it fixes the issue...

I'll give the process lasso solution a try!
