No-Newspaper6409

Resizable Bar is causing low gpu usage and huge fps drops.

Hello, I am new here and I wanted your help regarding this issue I am facing since I built my PC last year.

Computer Type: Desktop

GPU: ASUS RX 6600 8GB

CPU: Intel i5 11400F 6c/12t 2.6 GHz

Motherboard: ASRock B560M Pro4/ac+

BIOS Version: 1.60

RAM: Corsair 16GB 3200 MHz CL16

Just got this issue recently. For some reason the FPS drops and low GPU usage only were in my DX11 games. DX12, Vulkan, and OpenGL all ran fine. I didn't have any DX9 games to test but I'm sure it would be the same. So obviously disabling SAM in the AMD Software alone didn't help, so I had to go a step further and disable Resizable Bar and Above 4G-Decoding in my Motherboard Bios. After that, all my games returned to normal. It's weird because nothing was updated to cause this issue and rolling back on my GPU drivers didn't get rid of the issue. Oh well, I guess.

Just turn off the bar. Trust me. I've tried on multiple devices, and Resizable bar seems to be optimized better for pre-builds

  2   Reply ...**External_History3184** • 3mo ago

Nah it depends on the hardware

I had this problem yesterday, was trying to play SH2 Remake but had huge FPS dips to 15 fps constantly, i turned off SAM and Resize Bar on my mobo setting, and now i have a great experience, 60 fps most of the time, the dips to below 60 feel more natural (when there is lot of enemies) i'm going to try my rig on other games after i finish SH2 configs below

6600xt
RYzen 5 3600xt
32gbs ram 2400mhz
a320m mobo
