## Eye strain in oled C4

This Post Again?

Hi, anyone else has experienced this issue? I have the tv from this Tuesday and it has happened to me everyday, I tried to blink more watching the tv in case it helps but nothing, I can't watch more than 3 hours from the hurt in my eyes and then start a minor headache. It makes me wan to return to my old Samsung Q80r, my eyes did hurt but less and in more hours of viewing, with the oled tv I cant even see right from the bright lights that emits, I watched with subtitles and the subtitles also too bright, in gaming the image is more acceptable I don't know what the difference will be. I active the option to reduce blue light and it was more bearable but is still happening. Yet I do wish to keep the tv though, the quality and the color are stunning but is difficult to keep watching :( I don't want to lower the oled pixel light in HDR neither because everyone says that HDR content has to be in 100. Is this normal? Any advice? I don't wear glasses and my view is fine, I think.

Lower the brightness to whatever feels best on your eyes not what some random nitnerds on the Internet say to do. I sit 3' from a 48" c4 for 12 hours /day (mostly as a computer monitor) and it's helped my eyes if anything, but I only make the screen as bright as I need it.

I'm sure to get some flack for saying this, but in HDR I have contrast at 75. It still pops, but doesnt sear my eyes. Also gets the added benefit of providing higher fullfield brightness for a more consistent image. I like Oled brightness at 50 and contrast at 85 on SDR. (LG C3 42")

If you are normally watching at night or in the dark I'd recommend a bias lighting system with an OLED

Try Filmmaker Mode

As others have stated. Lower the brightness, maybe enable eye-care mode.

**rishavcharles** • 4mo ago

Turn off all additional picture processing under clarity. Change color tone to warm 50 Turn on eye care Then see if above makes any difference. I regret upgrading to G4 from my old sony oled just for the sake of HDMI 2.1. The panel is pain to my eyes

100.

now, most settings I have my brightness between 30-60 and never have issues.
