Skeptical about lian li galahad 2 trinity

Question

Heyy, I am planning to buy a lian li galahad 2 trinity (the UNI SL INF version) but saw a lot of reddit posts saying pump failed/ pump makes a lot of noise. Is it true, are the aios still failing?

How are your galahads holding up? let me know..

I had the galahad 360 i think the original like first one and the pump just failed after about 5 years or so...i just replaced with the trinity 2 and its been working great, nice and quiet and aesthetically pleasing.

You will get a distorted view of any product on reddit as people without issue wouldnt post on reddit They usualluly only post when they get into trouble.

I have the Galahad II Trinity Performance, its been okay a little loud. I love their fans and cases and strimers but cant recommend their AIOs currently due to too many reports of pump issues and L Connect 3 for some is still causing trouble.

If you value performance over rgb, the galahad 2 trinity performance 360 is the way to go.

Beats af3 in cooling benchmarks under heavy loads while most do fail.

My temps have never been better and its quiet

I've been using that exact one for almost a year now and no issues with performance or noise. I had it cooling a 5600x and now a 7800x3d.

I've had the GA II LCD for about three weeks now and it's working great. My brother has had his for about a week and as far as I know so far so good.

Small sample but I been using the 240mm Trinity ii for over 2 months and pump is still working. No complaints and I connect makes everything easy

I have the Galahad II trinity lcd for about 2 months now. It works fine for me, except that the LCD-Screen sometimes won't work as intended, meaning it doesn't load my settings at all or the Screen stays „black“ (leds are working tho), but coolingwise it's fine
