Help with motherboard

So recently I got a used Ryzen 2700x and motherboard combo to replace my old 6th gen xeon.

Yes i know, i replaced something without an iGPU to something also without a iGPU but now i am about to pull the trigger on the 14500 and motherboard but I am stuck which to choose.

Gigabyte B660 AORUS ELITE DDR4 or ASUS PROART B660-CREATOR D4.

Use case is Plex server / file server / *arrs / 3 -4 vms.

multiple NVME. B660 is neutered on PCIE lanes and it only has half of the DMI lanes.

Gigabyte Aorus Elite, Gaming X or Aero Z690 (or Z790) boards are excellent and very, very well suited / laid out for a home server.

If you can find a 13500 cheaper than a 14500, grab the 13500. There is no tangible performance difference in them. The 14500 got a 200mhz boost in Turbo. They are benchmarking within 1.5% of each other.

I can get the 14500 for the same price as a 13500.

I have no plans for 10Gb but i do have a HBA > 8 sata.

Are B760's neutered as well? Gigabyte B760 GAMING X AX DDR4

I'm sure this is a dumb question. What/Who is binhex and why should you use their version of the media apps? What is different?
