LG C2 "Screen Move" making text and sharp lines blurry

I've noticed that if I have the "Screen Move" option enabled in my 42" LG C2's OLED Panel Care menu, that when the screen move occurs, text and lines go from being sharp and crisp to slightly fuzzy and blurry. I'm using this as my main PC monitor and have the HDMI input set to PC as well as using all of the other recommended options from this subreddit's stickied post. If I disable the Screen Move option, I never see the slight shift and resulting fuzzy/blurry text and lines.

Has anyone else experienced this? I'd prefer to leave the Screen Move option enabled if that will ultimately help with burn-in but not at the cost of sharp text.

I also use the LG OLED as my PC monitor. I experienced the same with screen shift enabled. This is because for it to shift the screen, it needs to crop in (zoom in) slightly which makes the image blurry. I disabled screen shift once I noticed how blurry it was making things. I don't have any burn in and I bought my TV 2 years ago.

Yes. You're going to want to turn that off.

I think I have a similar issue, just recorded it - <https://youtu.be/U5dh2BgpH1k> .

It only happens on certain websites/when certain whiteness is present on page, everything goes blurry and washed
