Glittering_Sail_3094

RX 7900XTX or RTX 5080

I know this is an AMD reddit so probs going to have biased opinions. But based off of the recent 5080 benchmarks shown on the nvidia site, the rasterization looks like it'd be within like 2% of the rx 7900xtx, but with 8gb less vram and more expensive.

Without any bias, please can anyone advise on what the better card would be to get?

How do you play poe2 on Linux?

drummerdude41 • 15d ago

Through steam. Valve has made it simple enough that you just click install and then click play like in windows. There could potentially be additional steps depending on the game but proton which was developed by valve acts as a translator, allowing Windows game applications to function properly on Linux systems. games get patched regularly by proton which sometimes also includes additional performance increases or bug fixes windows does not have. It's a pretty cool tool.
