PudsBuds

Best public anime tracker?

I have been unable to find invites to any of the popular private trackers so I would like to know some of the better public trackers.

I've tried using some nyaa offshoot but for whatever reasons the torrents show up but no peers are ever found..

Edit: specifically I'm using sonarr / jackett to set up indexers and need something that plugs into those. My whole setup is docker and doing things manually messes it up / is not as easy to work with

The two main nyaa sites now are:

<https://nyaa.si/><https://nyaa.pantsu.cat/>

Both work. Other than getting stuff directly from sub groups, I don't know of any better public options. On these nyaa sites, it's very easy to get seeders for anything relatively new. For older stuff, it's harder to find seeders on public torrents.

[Nyaa](#) is the best. If you need alternatives though...

[Animetosho](#) / [Anidex](#) / [Tokyotosho](#)

I don't think there is any other dedicated anime trackers. Nyaa is best, Animetosho just mirrors the others (english translated only though, I think) so it's more or less equal. I don't really use Anidex but I've noticed some content there not on Nyaa. Never used Tokyotosho, I only know of it.

There's some others with anime sections that come to mind like [LimeTorrents](#).

Nyaa is the de facto anime tracker.

**[deleted]** • 6y ago

nyaa.si, I'm pretty sure nyaa.pantsu.cat lost the war for users eventually

pretty sure nyaa is your only option for public, but honestly, public trackers in general are a mess.

find a way to get into a private one. ab if you're fine with having shitty torrent clients forced on you, btn if a decrepit and borderline abandoned site (from the maintenance side) and not being anime specific isn't a problem for you. both sites are top notch when it comes to content and speed in getting stuff as soon as it's released. (unfortunately, there is no perfect site for anime like there is for movies or music).

but for whatever reasons the torrents show up but no peers are ever found..

make sure you are connectable (port forwarded/upnp and service visible)
