Dry-Vermicelli-682

2.5gig switches still in the 100+ range 2+ years later.. ??

Just trying to find a simple 4 port 2.5gig switch from a well known company. Not sure I trust any of the \$75 to \$100 china ones. But those are even expensive. 2+ years ago they were about \$130.. I bought one. Why are they STILL that same price 2+ years later? Yet I can get a 5 port 1gig for like \$15 on a good day.

If I could find them. Every time I try to go buy them from the ubiquity website I get told they're out of stock even though I can add them to cart. I can't get them locally either, because Micro Center doesn't stock them.

You just have to find a reseller.

I just bought a unifi 24 xg switch (24 multi/10g ports) for a little more than a grand like a week ago from double radius, who is an authorized ubiquiti reseller. From start to finish, finding and ordering the switch took probably 20 minutes, including creating an account.

honest I didn't dwell much on it. I was thinking of Ubiquiti, but I need ip/MAC vlan functions and not just port based. And would like multi gig because not all my devices are the same speed. Some are 1g. Some are 2.5 gig. Some I can simply upgrade to 10g and others I can't. So I want a reliable managed switch to control the whole home and at least 24 ports. I'm from the old 10/100/1000 copper era of networking so these new fangled network protocols are new to me dag nammit! (Yes purposefully sounding like an old fart because I'm becoming an old fart).

 5  ...**dsmiles** • 1y ago

Here it is: <https://store.ui.com/us/en/products/usw-enterprisexg-24>

Ports 1-24 are 1/2.5/5/10g. I believe 25-26 are 1/10/25g.

I'm not sure about the other features you mentioned, but I hope that helps! I also needed a switch that had at least 8 10g ports and only a couple 2.5g ports, but I struggled finding any with both without spending a lot (as linked here).

Recommendations for a small managed switch for remote locations. Think telephone poles or remote shelters near towers. Four ports with SFP/SFP+ would be perfect. Enterprise grade would be preferred.
