Crashyy

Running Unifi controller behind a reverse proxy.

Proxy

I am trying to setup the [Unifi controller](#) behind a reverse proxy using [nginx-proxy-manager](#) it more or less appears to work but I keep getting 400 errors.

```
✖ ▶ POST https://[REDACTED]/api/login components.v5.11.46.0.js:62
400

✖ ▶ GET https://[REDACTED]/api/self components.v5.11.46.0.js:62
400

✖ ▶ $stateChangeError: base.v5.11.46.0.js:53
  ▼ {fromState: "manage.account.login", toState: "manage.home"} ⓘ
    fromState: "manage.account.login"
    toState: "manage.home"
    ▶ __proto__: Object
```

Awesome I will have a play around with this tonight, I am not quite sure how nginx-proxy-manager works internally so I am just going to try pasting that in and then start messing with it :).

Cheers!

In nginx-proxy-manager do you have the scheme set to https? It defaults to http but needs to be on https as the unifi controller is configured to only accept connections over https.

(I just tested on my config and changing to http causes it to throw 400 errors)

I've been running Unifi controller for several months behind nginx-proxy-manager for with Scheme set to https, Websockets Support enabled, and Block Common Exploits enabled.

Crashyy OP • 5y ago

I do have it set to https:// I have not enabled Websockets, or Blocked common exploits though, I will try that tonight!

Cheers!

What's the point of self hosting if you're depending on someone else's servers?

I never saw the benefit of these network maps previously. Now that even my modest setup is growing in complexity, I really get it now. It's very useful to help with troubleshooting.
