Downloading torrent immediately changes to errored status

I am on qbittorrent webui setup with the *arr stack and I queued up something to download but despite plenty of seeds active the status switches to errored and doesn't download. Tracker list says few working some updating/not working. Any idea what could be wrong?

If your on linux, check the download location permissions. Usually thats 99% of the problem.

If this is a seedbox do in SSH "sudo chmod 777 -R /yourdownloaddirectoryhere"

I had the same problem half way through downloading a bunch of files. I use Unraid and my torrents download to a 500gb cache drive before later being moved to the larger drives. Bottom line I ran out of space on the download folder.

For what it's worth to anyone else experiencing this... I recently updated qbit and in doing so, I changed the UID and GID values with the new stack - this caused the Errored status for all new or existing torrents attempting to download. Changing them back to the original values corrected the issue. Good luck.

775 will do just fine and better security.

Why is this torrent downloading in a big burst every 20 minutes rather than a consistent speed?
