VLAN over WireGuard VPN

Question

Hello folks,

With the recent update of the Network Application, wireguard is added to the VPN client setting. I have never used VPN clients before (on the UDM-P).

I searched this subreddit and googled a bit but I am not able to find a recent post about it.

My questions are fairly simple; Is it possible to route a certain VLAN through a VPN client but only this VLAN? Is it also possible to route one or more hosts through a VPN? Or is the VPN client connection being applied on all outgoing traffic?

Thanks in advance!

Look at the Settings / Routing / Traffic Routes to see how you can route the traffic to the VPN once you have it created. There you can see that you can route a specific VLAN to the VPN.

Great thanks. Yeah probably that option is there when I add an VPN connection first. But as mentioned didn't do that as I didn't know the behaviour.
