[Request] Path of Exiles 2 Surface Laptop 7 X Elite.

[Request]

I tried but quickly gave up because it was either running at 20fps with ok graphics or at 35fps with graphics from 2000. I did not even play the game, I just walk about 10m trying some settings and then get a refund.

I am interested if someone has made more testing to achieve a nice balance between perfo and graphics, especially for the latest stages of the game which I heard are becoming more complicated to handle due to all the effects.

What resolution and settings did you try?

And were you using the updated graphics driver from Qualcomm?

Thanks for trying either way

My drivers are not the beta one, just using the standard windows update system.

I would love to know more about this as well if someone can do more extensive testing
