How do I install Luci? It looks like it no longer is paired with the firmware on a new install

I'm working up the courage ot install openwrt but if I go to my [device's page](#)(Cudy wr3000), it only shows that Luci is available on an upgrade.

Is there a guide for idiot's that can walk me through the installation process?

I could have sworn that a few years ago Luci was available on default on all new installs (when they merged the project with another router firmware, ddwrt I think it was called)

Have you tried ssh into the Router then

opkg update

opkg install luci-app-opkg

luci isn't included in the snapshots.

but if you use the link you posted, and click the request build button, you'll get an image with luci included.

I feel like an absolute dunce, I am not seeing "request build button" on that link.

Long story short, it tells you to install the manufacturer-signed version of OpenWrt (which you can download from the manufacturer's site) first, and then upgrade it to the current version.

Oh thank you for that. I had scanned the device page but it starts off with an empty template.

I didn't bother reading it carefully after that.

Thanks!
