Enable SSH

Hi,

I could not figure it out how to enable ssh. I nmap'd my unraid and it shows port 22 is closed. How can I enable ssh?

I can't remember but I'm pretty sure you have to install an add on for it or something. I guarantee 5 minutes of googling will reveal the answer. That's how I figured it out.

```
# ps aux | grep sshd
root      23907  0.0  0.0   9640  1848 pts/1    S+   21:26   0:00 grep sshd
```

All the files in /boot/config/ssh/ have 0 bytes, but the sshd_config

I Fixed Mine Just Now

Use telnet or a terminal ...

```
cd /boot/config/ssh
```

```
ls -l
```

Are the keys empty? Mine were - delete and reboot to fix

```
rm ssh_*
```

```
reboot
```

Then there was joy :)

unRAID v6 and later automatically sets up the SSH keys necessary for SSH access. For terminal access from a Windows station, use the PuTTY instructions below to install, configure, and set up the SSH connection

can you check to see if sshd is running?

what would be the command for that? I tried to use service, and got command not found.

I ran this command

```
# ps aux | grep sshd
root      23907  0.0  0.0   9640   1848 pts/1    S+   21:26   0:00 grep sshd
```

SSH should be enabled by default. However, the only account that can connect (by default) is the root user. :)

So if you do get it running, keep that in mind :)

I tried to ssh using root, and got connection refused. I nmap'd my server and it says it was closed.
