DallasBelt

Share subnet with other user

Help Needed

Dear community,

I have a node that is advertising a subnet. I can access it without any problem, but the user I shared the node with can't. Is there a special configuration I need to set? Or is not possible to do that?

Thanks in advance.

I joined a different Account to my Tailnet, but it just won't find any devices in this Subnet.

I have some more Information in this Post I made: <https://www.reddit.com/r/Tailscale/s/PesFMWkRyl>

Thank you for your help in advance.

I remember the same happened to me. It had to do with the Tailnet that you have to select when opening the shared link.
