[Noob Adjacent] OpenWRT, PIA through OpenVPN, Need to set up port forwarding

[HELP - ROUTER](#)

I have proxmox and OpenWRT. I have a virtual router that acts as the gateway for all internet traffic from the proxmox containers. PIA is set up on the router, so all outbound traffic is on the VPN. I need port forwarding to increase my connectability within my ISO community. Has anyone been successful in getting port forwarding to work with PIA on OpenWRT? From what I have read there are scripts, but none tailored for OpenWRT, so I am just kind of curious if anyone could share their experience. I am having trouble connecting to some members of the community. Thanks in advance

Also, just to be clear, when using a VPN, port forwarding on your route would do nothing, right? Because its all being sent to the regional server first, so the port forwarding would *have* to happen on the PIA servers, right?

My NAS suddenly stopped being accessible remotely (including VPN). Unless this is IPv6 related I'm stumped. Can I fix with only router/NAS QuickConnect?
