My knowledge is horribly limited, but something like making the SSID use a separate vlan, and route the traffic from that vlan through the VPN interface.

Small info, but maybe enough keywords to start searching for specifics.

This is exactly how I do it.

I have a separate subnet that gw through a VPN service and that VLAN is associated with the specific SSID.

via OpenVPN). I'll try to find the documentation or step-by-step I made...

~~Pretty sure this will work:~~

- ~~1. Create a new interface in LuCI. Don't assign it a device.~~
- ~~2. On the wireless screen, assign the new interface to one of your AP's.~~
- ~~3. On the Firewall - Zone Settings screen, create a new zone. Select the new interface you created under "Covered Networks". Select only the VPN interface in the "Allow forward to destination zones" field.~~

~~Someone correct me if this is wrong.~~

Much better tutorial: <https://www.gastonotero.com/blog/creating-a-vpn-only-lan-in-openwrt>

hey, couldnt find my step-by-step, but i found a how-to by NordVPN to set up a vpn. just add an additional vlan, an interface and IP subnet to it, then point that vlan to the vpn.

<https://support.nordvpn.com/Connectivity/Router/1047411192/OpenWRT-CI-setup-with-NordVPN.htm>
