FARSUPERSLIME

VLAN for VPN traffic

Im trying to create a vlan on openwrt that only goes through my vpn of choice (Windscribe) but I am not sure how to go about this, I believe I have the creation of vlans correct but I don't know how to make traffic on this vlan pass through the vpn, any help would be appreciated.

These aren't LANs though? I have vlans created and those do not show up in the menus at all, maybe I'm missing something, but that doesn't seem to be what I'm looking for.

I assume your VLANs have their own IP subnet, right? So you use the VPN policy routing for the entire subnet
