ACL rules to accept subnets

Alright, so I created some ACL rules to separate traffics from my hosts, and there is a specific host that I want to access a subnet. Let me write them down here.

`host1` is the client that needs to access the subnet

`host-subnet` is the client that is advertising said subnet.

Right now the only ACL rule that works for `host1` to access the subnet is:

```
{ "Action": "accept",  
  "Users": ["host1"],  
  "Ports": ["*:*"] }
```

Has anyone been able to add such a rule without explicitly tagging the advertised subnet to be accessed?
