Can't install Sonarr on RPI 3B

solved

Hi guys, 3 weeks ago I installed sonarr/radarr/plex on my rpi 3b w/ portainer. I reinstalled it yesterday, I was able to install everything (radarr, jackett, transmission, plex) but sonarr (neither in command line or via new container).

The script it :

```
docker run -d \
```

```
--name=sonarr \
```

```
-e PUID=1000 \
```

```
-e PGID=1000 \
```

```
-e TZ=Europe/Paris \
```

AutoModerator MOD • 2y ago

Hi [u/matmatidmat](#) - You've mentioned Docker [portainer], if you're needing Docker help be sure to [generate a docker-compose](#) of all your docker images in a pastebin or gist and link to it. Just about all Docker issues can be solved by understanding [the Docker Guide](#), which is all about the concepts of user, group, ownership, permissions and paths. Many find [TRaSH's Docker/Hardlink Guide/Tutorial](#) easier to understand and is less conceptual.

review this comment and you can likely have your problem solved without needing to wait for a human.

Most troubleshooting questions require debug or trace logs. In all instances where you are providing logs please ensure you followed [the Gathering Logs wiki article](#) to ensure your logs are what are needed for troubleshooting.

Logs should be provided via the methods prescribed in the wiki article. Note that **Info** logs are rarely helpful for troubleshooting.

Dozens of common questions & issues and their answers can be found on our [FAQ](#).

Please review our troubleshooting guides that lead you through how to troubleshoot and note various common problems.

- [Searches, Indexers, and Trackers - For if something cannot be found](#)
- [Downloading & Importing - For when download clients have issues or files cannot be imported](#)

If you're still stuck you'll have useful debug or trace logs and screenshots to share with the humans who will arrive soon. Those humans will likely ask you for the exact same thing this comment is asking..

Once your question/problem is solved, please comment anywhere in the thread saying 'solved' to change the flair to **solved**.

AutoModerator MOD • 2y ago

Hi [u/matmatidmat](#) - It appears you're using Docker and have a mount of [/tv]. This is indicative of a docker setup that results in double space for all seeds and IO intensive copies / copy+deletes instead of hardlinks and atomic moves. Please review [TRaSH's Docker/Hardlink Guide/Tutorial](#) or [the Docker Guide](#) for how to correct this issue).

Moderator Note: this automoderator rule is under going testing. Please send a modmail with feedback for false positives or other issues. Revised 2022-01-18

I got the issue because I ran 32 bits version of ROS Lite, I reinstalled it in 64bits and I got no pb :)

1

Westerdutch • 2y ago

Are you running a 32 or 64 bit OS on your pi?

1

matmatidmat OP • 2y ago

I was running 32 bits because 32bits version still worked 3 weeks ago, but then I reinstalled ROS on 64 bits and it's much better :D
