Your ISP will see (at a minimum) DNS requests for any of those apps that don't go through VPN (and depending on your VPN provider, they may get DNS info even if it is routed through a VPN server). In the US, browsing torrent trackers/sites is not illegal, and likely won't cause you any conflict from your ISP.

Torrenting copyrighted material in the US *is* illegal, so if you intend on doing that, your torrent/usenet client will need to go through VPN so that your ISP can't identify that traffic. But the bigger threat is your home IP address being captured by someone in the swarm that is getting IPs on behalf of copyright holders, in order to take action through ISPs. *That* is the main benefit that a VPN offers: the IP that the swarm sees is the IP of a VPN server.

Some people route *everything* through VPN as a precautionary measure.

Spot on.

I have completely moved away from torrents to use net. Moved my router to pfsense. Now I do dns over tls.

Use net is so much safer to use. I used a VPN and torrents and still got a copyright notice. Trackers can still get ya.

Putting Sonarr and Radarr through a VPN can cause issues with searches. The databases they use can block the VPN IP address due to too many requests and then your searches will start failing.

That's true, I hadn't thought of that when I wrote the post, I had the case with Jellyfin too a few months ago.

Angus-Black • 2y ago

Unless you live in a Country that blocks torrent searches you only need to use a VPN for your download clients.

review this comment and you can likely have your problem solved without needing to wait for a human.

Most troubleshooting questions require debug or trace logs. In all instances where you are providing logs please ensure you followed [the Gathering Logs wiki article](#) to ensure your logs are what are needed for troubleshooting.

Logs should be provided via the methods prescribed in the wiki article. Note that `Info` logs are rarely helpful for troubleshooting.

Dozens of common questions & issues and their answers can be found on our [FAQ](#).

**Please review our troubleshooting guides that lead you through how to troubleshoot and note various common problems.**

- [Searches, Indexers, and Trackers - For if something cannot be found](#)
- [Downloading & Importing - For when download clients have issues or files cannot be imported](#)

If you're still stuck you'll have useful debug or trace logs and screenshots to share with the humans who will arrive soon. *Those humans will likely ask you for the exact same thing this comment is asking..*

Once your question/problem is solved, please comment anywhere in the thread saying '!solved' to change the flair to `solved`.

I am a bot, and this action was performed automatically. Please [contact the moderators of this subreddit](#) if you have any questions or concerns.

I've heard that a setup similar but not exactly like mine, only passes Qbit and NZBget through a VPN.
⊖   ⬆ 1 ⬇   ⤷ Share   ⋯

Pinso2727 • 2y ago

What's the point of having Qbitt and NZBget on the same network? Won't you download faster? Or is it just a slave?

HeresN3gan • 2y ago

All my *arrs route including Prowlarr are routed via a VPN. Probably no real need, but why not eh?

⊖   ⬆ 1 ⬇   ⤷ Share   ⋯

Pinso2727 • 2y ago

Aren't you having problems searching for data by passing everything through the VPN?

One show is downloaded, verified the files are there in the folder (watched them) but Sonarr seems to think they don't exist.
