Best Method to use lets-encrypt on openwrt

Has anyone had success using lets-encrypt to create certificates for LuCI?

acme

acme-dnsapi

luci-app-acme

wget

luci-app-uhttpd

libuhttpd-openssl

You'll need to go through the luci-app-acme and possible the luci-app-uhttpd dashbords to get everything working. I'll assume you have used an [acme.sh](#) script before on a Linux system and know how to use the opkg command. If not, I don't recommend even trying untill you're comfortable with these two prerequisites.

Thanks for the idea. I've been wanting to do this for some time and did not realize how easy it is!

  4   Reply ...**throwawayagin** OP • 5y ago

how did you configure the uhttp / acme specifics, I've got 80->443 redirects working, acme cert seems to be generated and presented but it's still getting a warning in the browser as self-signed.

When I try to install libuhttpd-openssl I get:

```
* check_data_file_clashes: Package libustream-openssl wants to install file /lib/lib
    But that file is already provided by package * libustream-mbedtls20150806
* opkg_install_cmd: Cannot install package libuhttpd-openssl.
```

Any ideas how to proceed? Many thanks!

challenge, even though I'm providing my DNS api credentials. I made this issue:
<https://github.com/openwrt/packages/issues/11095>. I'm kinda tearing my hair out over this.

If anyone sees this, check the github link, I solved the issue. I was just being dumb.
