Streaming from PC with moonlight in 800p

Guide

After some research, I came up with a method to stream from my PC to the deck with [moonlight](#), using the correct resolution (1280x800 16:10) so I don't have the black bars.

This requires the usage of [Sunshine](#) instead of Geforce Experience, as it allows to run commands with the apps.

Also as there is no way (or I found none) to change the display res from cmd or powershell without installing extra software, I used [this little tool](#). Place the exe file in a folder where you can find it later.

Install Sunshine and after the normal setup go into apps and add the game you want, and click the add button under "Command Preparations", this adds two spaces for commands to be run when an app starts and when it closes, so in the first type `c:\ChangeScreenResolution.exe /d=0 /w=1280 /h=800` replacing the file path if it's different, I have it in C root, then in the other field type `c:\ChangeScreenResolution.exe /d=0 /w=1920 /h=1080` to reset the resolution to fullHD (change it if it's higher)

idk, someone calls that supersampling but I don't think that it adds something...
im now playing atomic heart and can't notice any difference between before that it was running in fullhd and now in 800p (other than the black bars)

For some reason I can't get the 'ChangeScreenResolution' program to work. I downloaded, and when I try to open it a window opens and instantly closes. Does anyone have any ideas or workarounds?

 2   Reply ...**Ryanlt234** • 2y ago

You have to run it from command prompt (Win key > cmd > enter), say if you place CSR in C: drive, your command will be `c:\ChangeScreenResolution.exe /d=0 /w=1920 /h=1200`

Play around in cmd first to figure out which monitor you're streaming for your "d" number is if you have multiple monitors, like mine is display 2 so i do `/d=2` for the above command

Thank you very much ! This works great, tried with Starfield

 1   Reply ...**FuYang1990** • 5mo ago

This worked great. After trying so many different options, this was the only one that fixed the aspect ratio issue for me. Many thanks!

example, I have two "applications", 800p desktop and 1080p desktop, with this solution I was able to set the host client easily, thank you for this!

now on the steam deck, I find that I have to change the streaming resolution as well, but this step is still manual, so right now it looks like this:

1. for 800p, I go into Moonlight's options, set it to 800p streaming, and then click on the 800p Desktop
2. for 1080p, I go into Moonlight's options, set it to 1080p streaming, and then click on the 1080p Desktop

Is there anything to take it a step further and make it automatically set the streaming resolution on Moonlight to match the host resolution as well?

Cozo_if • 2mo ago

Hi. I'm trying to get a game launching and I can't seem to find how to do that. The automatic resolution is working but the game is not launching. What's the exact path that I should paste on sunshine? With or without the exe, how did you do it?

Hello, I am trying to do this on Cemu so I don't get black bars, I was wondering for "output", would I do something like this?

C:\Users\username\Desktop\Cemu_2.0-39\Cemu.exe
