VM Setup Guide -

I am planning on rebuilding my Windows 10 VM. I last set one up in 2018 and followed Spaceinvader1's guide:

<https://www.youtube.com/watch?v=miYUGWq6l24>

Before I do the same I just wanted to check if there is another more up to date guide to follow. Its been nearly three years since that video was posted and no doubt there may be somethings that are out of date now so want to be sure I am following the latest and greatest guidance before I set it up!

I set this up a month ago, followed Spaceinvaders old video and wasn't able to get it running. Followed JDM's and had it running in about 2 hours.

<https://forums.serverbuilds.net/t/guide-remote-gaming-on-unraid/4248>

Just skip the parts about parsec.

I recently did a Windows Server 2016 VM following his guide and no issues.

This has been my main server page for 3 hours, I can't login. How do I restart it safely? This has happened before but I couldn't see a reason in the logs.
