What's up with AI Credits in Notepad?
<https://preview.redd.it/whats-up-with-ai-credits-in-notepad-v0-e5inu6sq5ipe1.png> I just saw this menu in Notepad. Is it like I can ask Notepad to generate some text or summarize it?

Why doesn't MS just introduce more expansive "theming" for windows? Give people an option of choosing win7/10/11 start menu, whatever they're into. Embrace the diverse community, unlike the competition

Windows 11 has been amazing for me but I like the windows 10 start menu, "explorerpatcher", it's my dream OS. Why make people choose? Why not expand windows "themes" to encompass all these things that people have significant personal preferences for?
