Wow the touch screen input is really nice. It's stupid that moonlight maintainer did not accept the PR.

Why not making PR to the original repository instead ?

Why not? I already did. But the maintainer doesn't care. It was not me who make decision for the original repo.

Nice, will try it out on my M4 iPad Pro. There is already a beta version that supports Spatial Audio and Head tracking (atleast on macOS). Will this also be implemented in this version of yours?

And is there also a tvOS version planned? Would like to use the higher bitrate option (upto 500Mbps)

I have no device to deal with tvOS. Currently busy with something else, nothing planned yet.. not sure how far will this fork go.
