## Confused about AnimeTosho + AniDB integration.

There isn't much information about this. Tosho requires AniDB, I get that - but how do I set that up? Do I need an anidb client program running locally?

There is no key, just the name you gave and the version you gave.

Weird, I tried with HTTP and UDP client, both use version "1". I tried to set the project as public and private, but neither worked... When I check the logs I just saw an generic error "BAZARR Error (AniDB API Client error. Client is disabled or does not exists.)".

I'm running into the exact same issue. Any tips would be appreciated.

Fixed, the name needs to be In lowercase in animedb and bazarr
