## Confused about AnimeTosho + AniDB integration.

There isn't much information about this. Tosho requires AniDB, I get that - but how do I set that up? Do I need an anidb client program running locally?

Fixed, the name needs to be In lowercase in animedb and bazarr

Could you provide your exact setup? Also having trouble with this, everything is lowercase

AnimeTosho is having server issues. Looks like Bazarr uses the feed api (feed.animetosho.org/json) which is impacted by the outage.

19th Sep 2024: Maintenance on the secondary webserver is planned to occur on 2024-09-21 06:00 GMT (affects attachments, screenshots, torrents, NZBs and feed). Downtime is expected to be around 1 hour, should no complications occur. UPDATE: server is currently experiencing boot failures, remaining downtime unknown.
