Setup AnimeTosho Provider

Description:

Since it have been a few people unable to configure by themselves, and currently Bazarr UI is not the most user friendly on configuring integrations at the moment. This is a step-by-step on how to create your HTTP AniDB client and use the Animetosho provider.

This guide assumes that you have Bazarr already configured and working!

Steps:

1 - Navigate to [AniDB](#) and sign up for an account

That looks awesome. Thanks for the help, I'll give it a try. The other day I wanted to add AnimeTosho as provider to Sonarr, but couldn't find how to, any help there will be much appreciated too.

But you can also add AnimeTosho to your Sonarr without a problem, just not like this post describes, even better, start using Prowlarr, and it'll be easier to set up indexers

It's a straightforward process but still I have an error in the log:

BAZARR Error (cannot access local variable 'anidb_id' where it is not associated with a value) trying to get video information for this file: /data/media/tv/Dragon Ball Super (2015) {imdb-tt4644488}/Season 05/Dragon Ball Super (2015) - S05E42 - Accelerating Tragedy Vanishing Universes [Bluray-1080p][AC3 5.1][x265].mkv

Also I can't set a Client Name in your format. Form only approves lowercase names. Still name displayed on the AniDB list starts with capital letter.

I've tried both names with and without capital letter and error is the same. Any ideas?

Thanks for the guide. Would it be possible to have it immortalized at <https://wiki.bazarr.media/> ?

This is very appreciated. Made the process a breeze instead of having to look for different areas to get the information. Greatly appreciated

For the contact and URL in step 5, do you need actual email and URL of your website?

```
/app/bazarr/bin/bazarr/subtitles/refiners/anidb.py:114: FutureWarning: The behavior of
if mapping_list:
/app/bazarr/bin/bazarr/subtitles/refiners/anidb.py:179: FutureWarning: The behavior of
if not episode_elements:
/app/bazarr/bin/bazarr/subtitles/refiners/anidb.py:145: FutureWarning: The behavior of
if not episode:
```

It is working but will spam log with this. Thank you for the procedure, I gave up halfway through but this solved my problem.

I think this issue has been resolved on Beta already
