Official docker image with subnet routing

First off: I am in love with tailscale and am using it to solve man problems.

One of my first solutions (at my home) is the tailscale plugin in homeassistant. It works like a charm with subnetrouting enabled I can access the whole local network there.

For another site (parents) I want to install tailscale via the official docker image tailscale/tailscale:latest

I figured out how to make it non ephemeral via the environment variable

```
TS_STATE_DIR=/var/lib/tailscale
```

But I am stuggling makeing a subnet routing announcement:

`TS_ROUTES` is what you should use for the subnet routers

For exit nodes you'd want to do `TS_EXTRA_ARGS="--advertise-exit-node"`
