name is resolved by wireguard it will not be resolved and since wire guard has no concept of a actual connection It will simply stop working if the IP for that name changes while you're in the middle of using it until you restart the tunnel.

There is a script for doing this in a way that doesn't tear down the tunnel.

<https://github.com/WireGuard/wireguard-tools/blob/master/contrib/reresolve-dns/reresolve-dns.sh>

You can make runtime changes to wireguard... so you can leave the tunnel up and just change the endpoint.
