Wireguard Configuration Creator.

[Tools and Software](#)

With the help of ChatGPT I created a configuration editor that I thought you guys might like so I thought I would share it.

You give it all the information about your wireguard server. Then you can save that info out as a JSON file. You can save multiple names or as I call them locations. Then when you need to create config for one of your wireguard servers you can drop it down and select it from the list.

Then just added the preshared key of the peer from your server, hit update info and generate config and it will spit out a generated config you can copy and paste into a wireguard client or have it create a QR code.

Dropbox Download

Contains both precompiled exe's and source code

I'm probably not going to use it, but something that could be potentially interesting is adding iptables config. Like which IPs should be allowed on which ports on a subnet.
