Multicast and Broadcast Filtering - Which Network?

Official Ubiquiti

I have a ton of IoT devices on their own Network/VLAN. I am a little confused by the description in the option for "Multicast and Broadcast Filtering". My trusted devices are on my regular LAN network.

Am I filtering on my main LAN network and only allowing (through the exception list) through what I want...or am I supposed to be filtering ON the VLAN Network? Sorry to ask, but unfortunately, this feature happens within the ATHx interface and TCPDUMP isn't really any help to triage

If I watch Wireshark for multicast on a laptop in the "trusted" LAN, I basically see all multicast die when filtering is enabled (which is obviously expected)...however, even devices that I add to the exception list are still getting blocked.

FWIW, I have the USG + 60Watt Switch + 3 Unifi NANOHDs

EDIT: The Unifi controller picks the wrong MAC address for the exception list for the USG... look into your USG

Likewise, the exception list only applies to the SSID.
