For anyone with macOS having issues with Synapse

Tips

Hi! Recently I have bough a keyboard and a mouse from razer, but I could not configure them because Razer Synapse it is not working on the latest macOS. However, I was just about to return them since I cannot configure them properly. Just when I was about to give up i found this soft Razer macOS (<https://github.com/1kc/razer-macos>) that lets you configure and play with the devices lightning. Also, for the audio EQ, the best soft that I find is "Boom2:Volume and boost eq" that you can find on app store. Hope this helps anyone with the same problems. Greetings!

The Razer-macOS software is handy. I was able to set the light on a Blackwidow Chroma (2015?), Blackwidow 2019 with it, as well as a Naga Trinity, Mamba Elite and a Basilisk v3.

The only mouse I have that will not work with the software whatsoever is the Deathadder v2. For that matter, it did not work with OpenRGB either. Might have to look into physically removing the LEDs on that v2 disco ball.

[Razer Synapse does not currently support MacOS](#). Razer peripherals still have basic functionality with MacOS, some Razer products with onboard memory can have profiles set on windows and saved onboard to use on other devices.

For Chroma/RGB customization on Mac, consider these 3rd-party alternatives:

- [razer-macos](#) ([discussion here](#))
- [OpenRGB](#)
